5

WHAT IS CLAIMED IS:

A plasma processing apparatus comprising:
 a process chamber for processing by means of plasma;
 microwave transmission means for transmitting microwave to said process chamber:

a dielectric for radiating the microwave transmitted by said microwave transmission means into said process chamber; and a slot antenna plate formed of conductor, placed on a side, facing said process chamber, of said dielectric, and including an opening for passing the microwave therethrough radiated from said dielectric.

- The plasma processing apparatus according to claim 1, wherein said opening of said slot antenna plate is positioned directly below an antinode of a standing wave of the microwave in a resonator constituted of said microwave transmission means and said dielectric.
- The plasma processing apparatus according to claim 1, wherein said slot antenna plate has its potential adjusted at a ground potential or a positive potential.
 - 4. The plasma processing apparatus according to claim 1, wherein said slot antenna plate includes a channel for a process gas.
